

MobileView enterprise visibility software

- Locate and monitor your assets and personnel in real time
- IIoT integration - use data from both AeroScout and 3rd party devices
- Tailored for industrial applications
- Automatically triggered events that are configured to your criteria
- Fully scalable, enterprise-class system

MobileView provides a simple, yet powerful means of tracking the location, status, and condition of assets and people. The software has a full range of applications with visualisation, reporting, management, and automated alerting options.

MobileView delivers Industrial Internet of Things integration; it unifies asset visibility data from sources such as AeroScout Wi-Fi Tags, Wi-Fi clients, Passive RFID, GPS, third-party devices and sensors, and turns this data into automated business processes – delivering a scalable, enterprise-proven software solution.

Applications for industrial users

MobileView includes several complete applications for industrial customers:

- Worker safety, including personnel tracking, evacuation monitoring for mustering, check in/out, worker duress and more
- Asset management, for tracking people and assets
- Condition monitoring, for recording temperature, humidity, and voltage
- Staff visibility, compatible with the latest bi-directional tags for acknowledging worker distress calls (version 5.2)

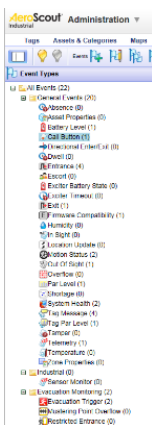

Each application has its own locator, alerts dashboard, and reports page for simple usage – and you can switch between applications with the click of a button.

Unified asset visibility

MobileView integrates with numerous location data sources and lets users apply a single, consistent set of rules to all their enterprise-wide location and status data. Via the optional **Generic Gateway** module, you can incorporate data from 3rd party sources, such as:

- Passive RFID
- GPS
- Ultra-wideband (UWB)

Automated business processes

Easily create sophisticated, rules-based events and alerts automatically triggered by asset location, status and condition to automate and improve everyday processes.

Intuitive asset visualisation

MobileView is an easy-to-use way to search and view asset location, status and condition information in real-time, or as a historical trail.

Configurable events and alerts

Automatically trigger configurable events, such as entrance/exit, tag battery level, temperature, humidity, and more. Easy to configure via the wizard, and response rapidly with the Instant Notifier software for immediate pop-up notification.

Multi-platform access

You can access MobileView both via a standard web browser, and via the purpose-built apps for smartphones and tablets.

Enterprise grade

MobileView is designed to support tens of thousands of assets through a modular and scalable architecture with high availability and clustering capabilities MobileView can centrally manage dozens of distributed sites and supports enterprise databases.

Audit trail and reporting

The System Audit Report provides a full audit trail to aid quality and compliance. You can also query, export, automate and print a variety of out-of-the-box and custom reports, such as detail asset inventory, utilisation, historical location and others.

A database organised for reporting is also available, alongside the optional Tableau business analytics tool.
